

## FAUNA - Tech Rider

PA system suitable for size of room, 4 channels (QUAD system) with subwoofer

Big table - 4 audio lines from table to PA. 1/4inch output from my laptop interface

1 Audio Monitor on stage

1 X AC power strip

If the performance space is big or audience are far from stage, I will need:

Live Camera (with operator or in a tripod) pointing to my table of instruments connected to a projector feed that projects close-ups and details from the instruments and my interactions with them to the audience.

Projection screen

### **LIGHTING**

red colored strobe lights for first movement of the piece

colored spotlight pointed at my position for the second movement (not behind the table)

colored smooth ambient light for the third movement

**SET UP TIME + SOUND CHECK : 90 min** - In addition to audio checks, it is very important that I can test the exact light situation during soundcheck, since my instrument includes light sensors that will be affected by the lighting conditions.

**Performance length:** 35 min aprox
